

1 **ABSTRACT OF THE DISCLOSURE**

2 A flat panel displaying apparatus is disclosed. The flat panel displaying apparatus includes
3 a liquid crystal display module displaying a picture, a chassis surrounding edges of the liquid crystal
4 display module, defining an external appearance of the flat panel displaying apparatus, a printed
5 circuit board provided with a connector connected to an external system by a connection cable,
6 being grounded to the chassis, a liquid crystal display controller provided in the printed circuit
7 board, activating the liquid crystal display module, and a ground portion formed around the liquid
8 crystal display controller. With this configuration, emission of electromagnetic waves of the printed
9 circuit board is minimized and reliability of the product is enhanced.
